

Installation of Vikingen on MAC operative system Catalina

1. You need to try or buy an extra program Crossover:
<https://www.codeweavers.com/products/crossover-mac>
2. Save earlier Vikingen folder in Documents if you want to save your own workspace or object lists from current Vikingen. You can do this by rename this Vikingen folder.
3. Install Crossover from step 1.
4. Start Crossover and click at the bottom “Install a Windows Application”.
5. Click at the top “Select Installer”.
6. Click on “Choose Installer File...”
7. Select the Vikingen_5.2.1.5_sv-se.exe installation file from Downloads in the second column. And click on Use this installer in the bottom right corner.
8. Click on “Use this installer”.
9. Click on “Continue”.
10. Select “**Unlisted application at the bottom of the list**”. And click “Continue”.

11. Click on “Install”.
12. macOS cannot verify the developer... dialog, click on “Open”.
13. Vikingen install start: Welcom to the install of Vikingen, click on “Next”.
14. Select: I accept the agreement.
15. Choose place, click just “Next”.
16. Choose Start menu catalog, click just “Next”.
17. Select icon on desktop are not working from here. You can after install drag Vikingen icon to desktop to make this link.
18. Ready to install, click “Install”.
19. Username and password, you should have received a new username and password from support@vikingen.se (one username only work for one computer once).
20. Click on “Ok”.

Finished!
